

## Part 1-3 → Converting to Mixed Numbers

$$= \frac{9}{4} = 2\frac{1}{4}$$

Tough way  
 $9 \div 4$

$$\begin{array}{r} 2 \\ 4 \overline{) 9} \\ \underline{8} \\ 1 \end{array}$$

remainder

keep denominator

$$\rightarrow 2\frac{1}{4}$$

Easier way → write out multiples of denominator

$$\frac{9}{4} = \underbrace{\left[ \begin{array}{c} \square \\ \square \\ \square \\ \square \end{array} \right]}_{2} \underbrace{\left[ \begin{array}{c} \square \\ \square \\ \square \\ \square \end{array} \right]}_{\frac{1}{4}}$$
$$2\frac{1}{4}$$

4: 4, 8, 12, 16, 20, ...
