

## Part 1-4 → Converting to Improper Fractions

$$= 2\frac{2}{3} = \frac{8}{3}$$

Tough way → multiply left add over top

⑥

$$2\frac{2}{3} \xrightarrow{\text{Add } \downarrow} \frac{8}{3} \xrightarrow{\text{keep } \rightarrow}$$

multiply

Easier way → write out multiples of denominator

3: 3, 6, 9, 12, 15, ...

① 1 whole  
② 2 wholes

$$2\frac{2}{3}$$

we have 2  
whole, or  
6 thirds

$$\frac{6}{3} + \frac{2}{3} = \frac{8}{3}$$
